Subject: Public input

Hello, As much as I appreciate the thought of asking input from the public, I do believe we do not have the experience of the hands on that is needed to make any logical input on this matter.

Ask or query the actual parties that have to deal daily with this type of informational transaction. They are your best source to clean it and make it easier for all. Then ask your managers which information is viable for their needs. Make a composite study of all the input from these sources to see if any such changes can or needs to be inputted.

Thanks

H. Delger
